OTHER IMPORTANT INFORMATION

CLIMATE & AVERAGE TEMPERATURES

- The climate of Hobart is oceanic, with mild, rainy winters and cool, quite rainy summers. At these latitudes (the island is located between 40 and 43 degrees south latitude), the western currents prevail throughout the year, with a series of disturbances that bring rainfall especially on the west side of the island. The wind blows frequently as well.
- Hobart is located in the southeast, and receives 570 mm of rain per year, which is not much, but the rains are well distributed over the seasons (although summer is the least rainy season), and often occur in the form of frequent drizzle and brief showers.
- The average temperature in Hobart ranges from 8.5 °C in July to 17.5 °C in January and February. So, summer is cool, but winter is mild, although the wind can exacerbate the sensation of cold. Sometimes, especially in June and July, a cold air mass can reach the island, and in the hills and mountains of the interior, snow and frost can occur. In Hobart, in the coldest nights, the temperature can drop to around freezing (0 °C) or slightly below.
- Tasmania is not completely sheltered

from the hot wind that can blow in summer from the Australian deserts, although this wind arrives here more rarely and with less evident effects. However, the temperature can sometimes approach or reach 38/40 °C, although heat waves do not last long, and at night, the temperature becomes almost always acceptable again.
